

INDEPENDENT SERVER BUILDER · MALAYSIA

Every server has a story.

ServerWare is Malaysia's independent, configure-to-order server builder. Since 2004 we've specified, assembled, burn-in tested, and supported enterprise hardware in-house — brand-agnostic platforms tuned to each workload, backed by a local warranty and real engineers.

CONFIGURED TO ORDER

— Who we are

ServerWare (Serverware Sdn Bhd, Reg. 200401023762) has built servers in Malaysia since 2004. We are brand-agnostic by design — we configure from the silicon up to what your workload actually needs, then assemble, validate, and support every unit ourselves. As a SuperMicro® partner since 2010, we pair enterprise platforms with local accountability: one team specs it, builds it, tests it, and stands behind it.

— What we build

Rackmount

1U–2U compute blocks for virtualization, databases, and web tiers.

GPU & AI

Inference nodes and AI workstations, CUDA stack pre-validated.

Storage

2U–4U storage and SAN / unified platforms, up to 24 bays.

Edge / Tower

Compact low-power blocks for branch, retail, and industrial sites.

— How we build

- ✓ Configure-to-order — specified per workload, not off a fixed catalogue
- ✓ Assembled and cabled in-house by engineers, not resold as-is
- ✓ Burn-in validated & QA'd before it ships
- ✓ 3-year local, in-house warranty with direct RMA support
- ✓ Tender-ready — spec consultation and compliant bills of materials

— Platforms & silicon

SuperMicro®

AMD EPYC

Intel Xeon

NVIDIA RTX / L40S

DDR5 ECC

PCIe 5.0 NVMe

10 / 25 GbE
